

I wish I did not have to go through the music library to choose a song apt to my current mood. I wish my music app would just read my mind

* Listening to music *

Why not design it?

System

Augmented headphones with sensors to capture the brain waves to interpret brain activity / mood and play music accordingly. Accepts voice commands

Signifiers

The shape of the headphones and the speakers on the earpiece suggest that it is to be worn on head.

Affordance

It can be worn on the head to listen to music

Testing

on people who listen to music quite often and are aware of different genres.

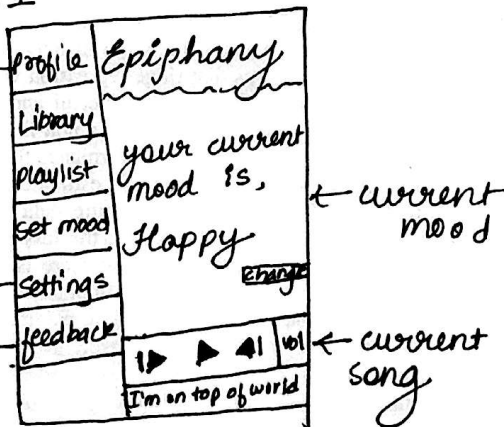

Evaluation

Studying subjects (help from psychologist maybe), customer feedback on prototype

GUI

to build recommendations

Personal preferences.

Rate the app

send message.

⇒ Feedback will help evaluate the success of the system. Can be used for improvisation.
